

1. **PLANNING AND DESIGN**  
The initial phase involves a detailed architectural and engineering design, including the selection of materials and the layout of the building's structure and systems.

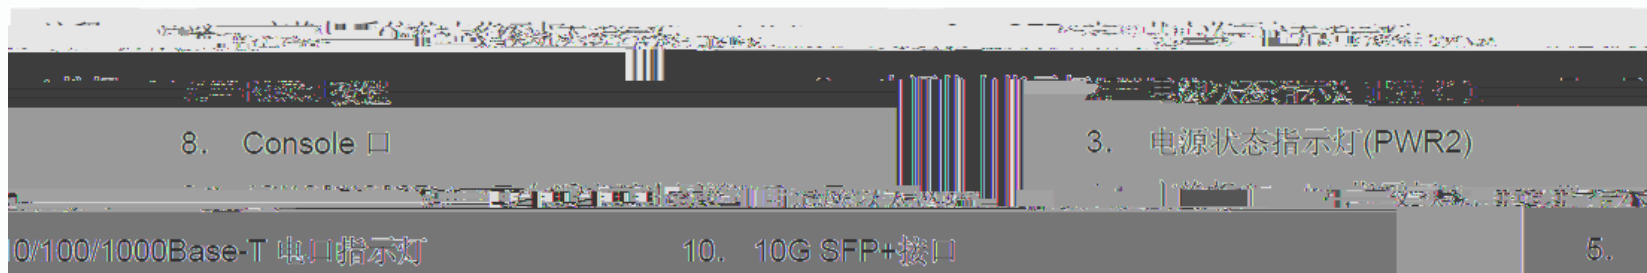

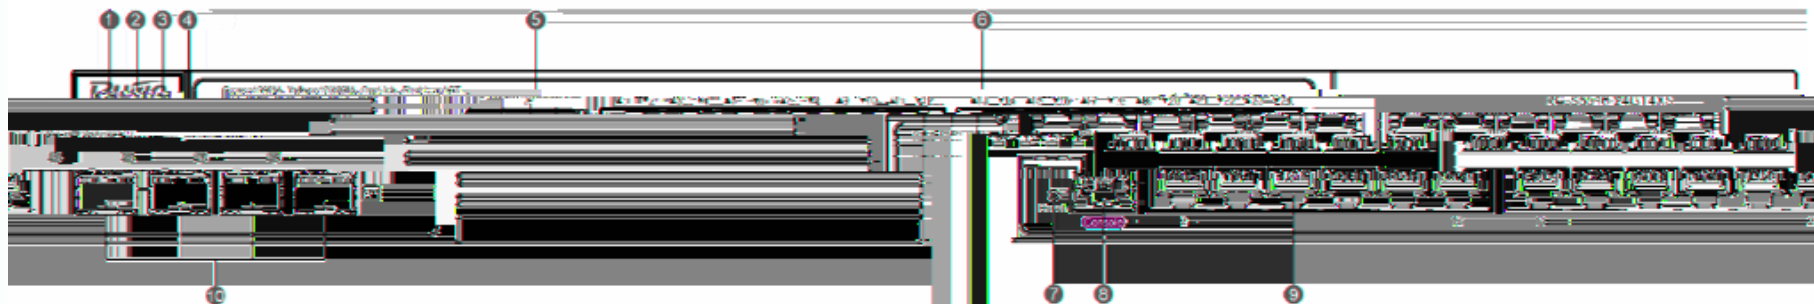

2. **CONSTRUCTION AND INSTALLATION**  
This phase involves the physical construction of the building, including the installation of the structural elements, walls, and ceiling, as well as the installation of the internal systems.

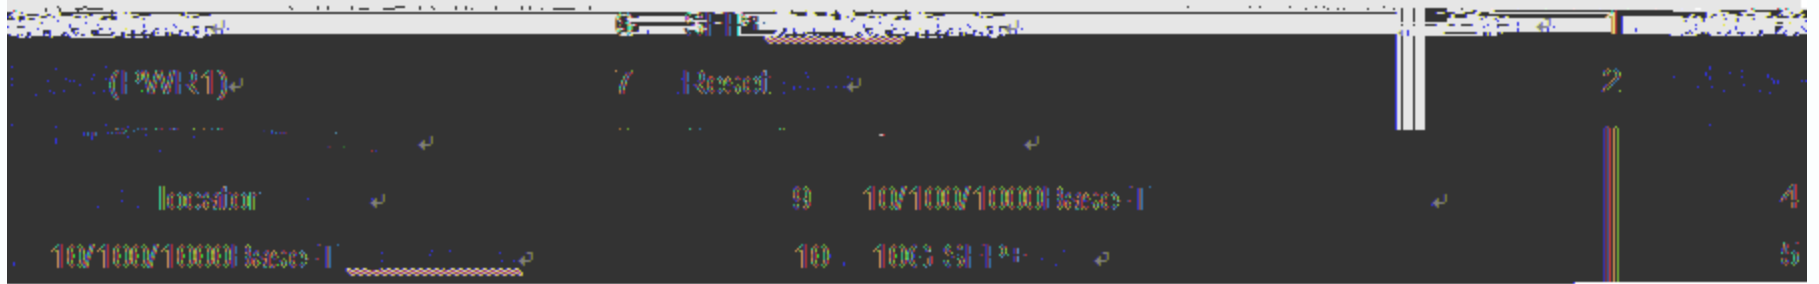

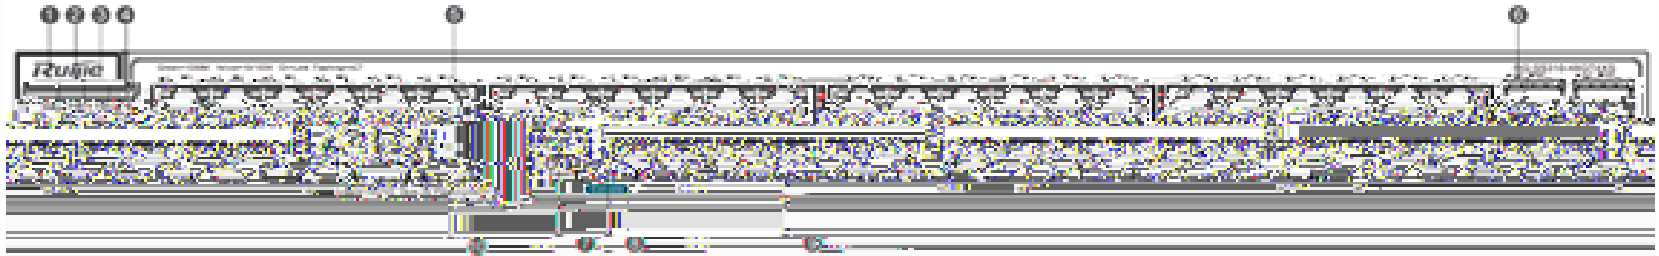

3. **COMMISSIONING AND TESTING**  
The final phase involves the commissioning and testing of the building's systems, ensuring that they are all functioning correctly and meeting the required standards.
